FYI Mariah Carey isn't taking no gay rabbits on tour with her. Just a few months ago, she downsized her arena tour to give fans a chance to see her in a more intimate environment. Oh yeah, the gay rabbits, of course. What is this about gay rabbits? I heard about that. Somebody said I had gay rabbits with me somewhere or something? That's right. Yeah, that would be not true. That would be one of those lies like I don't walk on carpeting. That would be not true.

It sings a song like no other. Some say it wanders all alone across the Pacific Ocean, crying out for companionship that never comes.

No-one knows for sure whether the whale is male or female, what species it is, or even if it still lives. The key notes of the song are at a frequency of 52 Hertz. To human ears this is a low bass note, but it is significantly higher than the blue whale, which sings between 10 and 40Hz.

Fruit flies are launched into space aboard a U.S. V-2 rocket in 1947. The rocket reaches 109 kilometres which technically makes the flies the first animals in space. They are all recovered alive.

The sound giant ants make as they approach their prey is a recorded chorus of bird-voiced tree frogs (*Hyla avivoca*) of the southeastern U.S.

Occasionally, a gray tree frog can be heard on the soundtrack as well, as these species can often be heard together at the same wetland. These distinctive whistling-type sounds will be re-used in various other films in the years that followed.

No giant ant is seen until twenty-eight minutes in, more than one quarter of the way through the movie. Jennifer Lopez will be ok.
